- For proper installation, please refer to the installation and owner's manual, which includes step-by-step instructions and a start-up checklist.
- AccuTemp Products, Inc. is not responsible for the installation process, and we do not recommend modifications to the electrical supply. Any in-field modifications made without written authorization from AccuTemp Products, Inc. will void all warranties.
- It is recommended that the wall receptacle be placed as low as state and local codes allow. Placing the receptacle in high heat zones, such as directly above, below, or beside the exhaust flue, may cause service issues not covered by the product warranty.

This checklist must be completed accurately and in full. To activate warranty, please submit this form to AccuTemp Warranty Department @ warranty@accutemp.net.

GRIDDLE SERIAL NUMBER:	XLR8 SERIAL NUMBER:

	YES	NO
1. Check all hardware. Is everything tight per the listed instructions? (Circle Y/N)	Y ☐	N ☐
